Hamari Pahchan

Ref No: HP/INT/10526/2025 **Dated:13/07/2025**

TO WHOMSOEVER IT MAY CONCERN

This is to certify that **Mr. Sameer Diwakar** has worked as an intern at our organization from **25/05/2025 to 25/06/2025**. His primary responsibilities included designing posters, creating content for social media, crowdfunding, digital media marketing, working on an individual project as a social entrepreneur, and drafting and filing legal documents, among others.

He has contributed extensive hours of volunteer service, consistently going beyond his assigned duties and proving to be extremely helpful to the organization in supporting the community.

During his tenure, he was found to be punctual, hardworking, and inquisitive.

We wish him a bright and successful future ahead.

Anjli Mathur
(President)

Hamari Pahchan NGO

Office Address: H. No. 1121, Mahipalpur Bypass Road, opposite Arjun Camp, New Delhi- 110037

Experiment 9

Aim: Write a program to remove stop words for a given passage from a text file from a text file using NLTK.

Source Code:

```
import nltk
from nltk.corpus import stopwords
from nltk.tokenize import word_tokenize

nltk.download('punkt')
nltk.download('stopwords')

# Take input from user
text = input("Enter a sentence: ")

words = word_tokenize(text)
stop_words = set(stopwords.words('english'))

filtered_words = [word for word in words if word.lower() not in stop_words]

print("\nAfter Removing Stop Words:")
print(" ".join(filtered_words))
```

Output:

```
Enter a sentence: This is a simple example to show how the program removes stop words from a sentence.

After Removing Stop Words:
simple example show program removes stop words sentence .
```

Experiment 10

Aim: Write a program to implement stemming for a given sentence using NLTK.

Source Code:

```
import nltk
from nltk.stem import PorterStemmer
from nltk.tokenize import word_tokenize

nltk.download('punkt')

sentence = input("Enter a sentence: ")

words = word_tokenize(sentence)
stemmer = PorterStemmer()

stemmed_words = [stemmer.stem(word) for word in words]

print("\nStemmed Words:")
print(stemmed_words)
```

Output:

```
Enter a sentence: The player was running and enjoying the games happily

Stemmed Words:
['the', 'player', 'wa', 'run', 'and', 'enjoy', 'the', 'game', 'happili']
```

Experiment 11

Aim: Write a program to POS (part of speech) tagging for the give sentence using NLTK.

Source Code:

```
import nltk
from nltk.tokenize import word_tokenize
from nltk import pos_tag

nltk.download('punkt')
nltk.download('averaged_perceptron_tagger')

sentence = input("Enter a sentence: ")

words = word_tokenize(sentence)
tagged_words = pos_tag(words)

print("\nPOS Tagging:")
for word, tag in tagged_words:
    print(f"{word} -> {tag}")
```

Output:

```
Enter a sentence: The quick brown fox jumps over the lazy dog

POS Tagging:
The -> DT
quick -> JJ
brown -> NN
fox -> NN
jumps -> VBZ
over -> IN
the -> DT
lazy -> JJ
dog -> NN
```

Experiment 8

Aim:

Write a program to implement a Hangman game using Python.

Code:

```
import random
words = ["cat", "dog", "sun", "pen", "cup", "book", "tree", "fish", "code", "game",
"ball", "milk", "road", "ship", "star"]
word = random.choice(words)
word_letters = set(word)
guessed_letters = set()
lives = 6
print("Welcome to Hangman!")
print("Guess the word, one letter at a time.")
while len(word_letters) > 0 and lives > 0:
    word_display = [letter if letter in guessed_letters else "_" for letter in word]
    print("\nWord:", " ".join(word_display))
    print("Guessed letters:", " ".join(guessed_letters))
    print("Lives left:", lives)
    guess = input("Enter a letter: ").lower()
    if len(guess) != 1 or not guess.isalpha():
        print("Please enter a single valid letter.")
        continue
    if guess in guessed_letters:
        print("You already guessed that letter.")
        continue
    guessed_letters.add(guess)
    if guess in word_letters:
        word_letters.remove(guess)
        print("Good guess!")
    else:
        lives -= 1
        print("Wrong guess!")
if lives == 0:
    print("\nYou lost! The word was:", word)
```

else: print("\nCongratulations! You guessed the word:", word)

Output (Sample Run):

```
Welcome to Hangman!
Guess the word, one letter at a time.

Word: _ _ _
Guessed letters:
Lives left: 6
Enter a letter: s
Wrong guess!

Word: _ _ _
Guessed letters: s
Lives left: 5
Enter a letter: d
Good guess!

Word: d _ _
Guessed letters: d s
Lives left: 5
Enter a letter: o
Good guess!

Word: d o _
Guessed letters: d o s
Lives left: 5
Enter a letter: g
Good guess!

Congratulations! You guessed the word: dog
```
